Formula to Help Decrease Urinary pH, Increase Urine Volume and Reduce the Concentration of Suspended Substances in Highly Palatable Chews

Presentation:

DIALIX® UT-5: 30 chews

DIALIX® UT-15: 30 chews

Characteristics:

- Complementary feed with complete action:
 - Helps to reduce urinary pH.
 - Contributes to the maintenance of the bladder mucosa under physiological conditions.
 - Decreases the concentration of suspended or present substances in the urine.
 - Helps increase urinary volume.
- With D-Glucosamine HCl – Provides Glycosaminoglycans (GAG), which help strengthen the protective mucosa of the bladder.
- Contains *Vaccinium macrocarpon* – Provides proanthocyanidins and helps lower urinary pH.
- Zea mays* provides tannins that increase urine volume and help reduce the concentration of suspended substances.
- Moderate magnesium content.
- Suitable for long-term use.
- Can be used alone or in combination with specific diets.
- Highly palatable chews – Facilitate daily administration.

Key Constituents (per chew):

	UT-5	UT-15
D-Glucosamine HCl	125 mg	375 mg
<i>Vaccinium macrocarpon</i>	50 mg	150 mg
<i>Zea mays</i>	30 mg	90 mg

Recommended Use:

- Helps to maintain the physiological conditions of the lower urinary tract in cats in the long-term.
- Helps to maintain the physiological conditions of the lower urinary tract in dogs in the long-term.
- Situations in which the reduction of urinary pH is required.
- Situations in which the increase in urine volume and the reduction of the concentration of substances in suspension is required.
- Helps to strengthen the mucosa of the urinary bladder.

Daily Use:

Once daily or divided in two intakes:

DIALIX® UT-5:

- Cats: Initial (2-4 weeks):
